## **SVC Power System Protection & Testing**

Date (\$)Fees

08 June -12 June 2025 SALALA 3200 Register Now

## **Course Overview:**

In theoretical, the towers feature distance and differential relays of different manufacturers and enable realistic test situations by simulating the bays related to the relays.

#### Upon completion of this course, students will be able to:

- Perform commissioning, trouble-shooting and periodic tests of protection relays
- Test overcurrent, distance and transformer differential relays with the SVC Test Universe

المركز البريطاني للتدريب

info@britishtc.org

- Create and modify automated test plans and customized test reports
- Use the SVC Test Universe from scratch

#### who should attend?

Technical staff from utilities, transmission and distribution networks, railway grids, service companies and manufacturers involved in protection testing

## **Course Outlines:**

- · Quick current and voltage output for easy wiring tests
- Configuration of the test object parameters and the test hardware
- Creating test plans which adapt automatically to newly entered relay settings
- Creating a flexible test plan for over current relays including testing pick-up values and trip times
- Hands-on testing of the over current protection function
- Creating a flexible test plan for distance relays including testing the trip times and zone reaches as well as switch on to fault (manual close) and auto-reclosing
- · Hands-on testing of distance relays
- Creating a flexible test plan for transformer differential relays including testing the stability during external faults, the tripping characteristic, the trip times and the harmonic restraints
- · Hands-on testing of transformer differential relays

# **Training Methodology:**

- · Presentation & Slides
- Audio Visual Aids
- Interactive Discussion
- Participatory Exercise
- Action Learning
- Class Activities
- Case Studies

- WorkshopsSimulation
